# STROBL PUMPEN

**Strobl Pumpen** is your partner for centrifugal pumps. We offer reliable pumps for all fields of conveying liquids. You have an issue in pumping? We offer the ideal solution! Therefore, we supply as well complete installations or packages. Excellent quality is our request to ourselves and our suppliers, with our products you decide to head for constantly high quality. This is highlighted by our production in Germany, our makes are truly „Made in Germany“.

Since our founding in 2006 we developed from a niche vendor to a highly specialised partner for machine and installation construction.

Our pump series meanwhile cover different industries and applications, from sewage water and drainage pumps in municipal use, over compact pumps for installations and vehicles to highly specialised pumps for the chemical, petrochemical and offshore industry.

Our main aim is to obtain highest technical demands and customers' requests from beginning of development to creation of final products. This is the major commonality of all our pumps.

Continuous development of our products and expansion with new complementing product series will determine our future actions.

As a constantly high quality is a goal to us, we record all development and production steps since the first day in accordance with the common standards. To have this confirmed externally, we are certified to ISO 9001 for more than ten years.

To us environment and sustainability are subjects that need to be filled with life. Therefore, we take care for small but efficient changes. Thus, we use rainwater, implement energy saving machines, have transferred our vehicle fleet to a mostly electric one and built our edifices to the latest energetic standards. To make our efforts visible, we joined the "Umweltpakt Bayern" in 2019, where we obligate ourselves to take further ecological steps.

In addition we joined "Familienpakt Bayern" in December 2023. Social commitment for us starts with our employees, whom we want to present an ideal work environment with or without having a family.

Strobl Pumpen is an owner-managed family enterprise. Our innovative employees are base of our success. Our company is located in Hilpoltstein, close to Nuremberg and therefore in the heart of Bavaria. Since 2010 our headquarters are in the industrial area "Am Kränzleinsberg". The office building with fabrication hall and big test bed has already been enlarged in 2016 by another hall. 2019 we added a deep bore hole to the test bed and in 2020 we moved into the out-building of the yet existing office edifice.

Together with our employees and our customers we want to grow further and fulfil our core point conveying of liquids best possible.

## General description

Chemical standard pumps in the CNP series are single-stage, normal-priming centrifugal pumps that have been developed for use in the chemical and petrochemical industries. The pumps are characterized by standardized dimensions and hydraulic performance, based on ISO 2858. This is supplemented by smaller and larger sizes. Our series covers the full range, from simple basic variants to ISO 5199 variants and API 610-OH1 versions. The possible scope of supply ranges from individual pumps with free shaft ends to fully developed, highly integrated complete systems.

## Fields of application

Chemical standard pumps are primarily used to pump various liquids in the chemical industry. Due to the variety of available materials, they can also handle aggressive or abrasive liquids. These pumps can handle acids, alkalis, and slightly viscous substances. Our clients currently use chemical standard pumps in the following areas:

- Conveying of process liquids
- Hydrogen production
- Chemical recycling of plastic waste

- Industry and plant engineering
- Circulation of liquids
- Refinery and offshore applications

## Operating data

Flow:	Q up to 1500 m <sup>3</sup> /h
Head:	H up to 160 m
Motor power:	P from 0,37 kW to 355 kW
Casing design pressure:	Series CNP/CNPL/CNPN: 16 bar at 20°C 25 bar at 20°C, material with higher strength
	Series CNPHL/CNPHN: 100 bar at 20°C
	Series CNPH2L/CNPH2N: 250 bar at 20°C

Medium temperatures: from -20°C to 350°C

Other operating data and variants with heating and cooling jackets are available on request.

## Connections

Flanges are designed as RF flanges in accordance with EN 1092-2/PN16 as standard. For variants with higher pressure ratings, the pump casings are equipped with flanges in accordance with EN 1092-2/PN25, PN100, PN250 or special high-pressure flanges, depending on the application. As an alternative, all flanges can be drilled according to the relevant ANSI B16.5 variants (150RF or 300RF). Adapters for special customer-specific flanges, other standards or threaded connections are available on request.

## Type code

### Series

#### **CNPL** 40-25-160-XX

CNPL/CNPHL	- Horizontal chemical standard pump, with oil lubricated bearing and free shaft end (standard version)
CNPN/CNPHN	- Horizontal chemical standard pump in close coupled version
CNPVS	- Vertical sump pump with medium lubricated guide bushings

Our CNPL and CNPHL series pumps are designed with high-performance, oil-lubricated bearings and a free shaft end. The bearings can optionally be supplied as grease-lubricated or high-temperature versions. The free shaft ends make it possible to use different versions of drives on the pump. To ensure correct installation of pump, drive and coupling, all our pumps can be supplied with different base frame options. If additional drip leakage needs to be drained away precisely, our base frames can also be equipped with a drip tray and drain connection.

Our CNPN/CNPHN series pumps do not require any own bearings. The motors are flanged directly to the pumps. Standard motors are equipped with stub shafts for this purpose. This design is more compact and shorter than the CNPL/CNPHL series, and bearing maintenance intervals are completely eliminated.

Our CNPVS pumps are designed for direct tank installation. In this configuration, the casing and impellers are fully submerged in the medium, while the motor is installed in a dry location. This design complies with VS4 according to API610. Depending on the version, the existing intermediate bearings used for shaft guidance are lubricated either directly with the pumped medium or with grease.

### Nominal size of suction nozzle

CNPL **40**-25-160-XX      See dimensional drawing or characteristic curve

### Nominal size of pressure nozzle

CNPL 40-**25**-160-XX      See dimensional drawing or characteristic curve

### Nominal diameter of impeller

CNPL 40-25-**160**-XX      See dimensional drawing or characteristic curve

### Impeller execution

CNPL-**I** 40-25-160-XX

- O            - closed multi-blade impeller
- I            - semi-open impeller
- I            - Inducer

### Execution code

CNPL 40-25-160-**X31**

- Standard version
- X01    - Version with casing wear ring
- X10    - Version PN25 if not identical to PN16
- X11    - Version PN25 if not identical to PN16 + casing wear ring
- X20    - Version PN40 if not identical to PN16
- X21    - Version PN40 if not identical to PN16 + casing wear ring
- X30    - Version ANSI RF150
- X31    - Version ANSI RF150 + casing wear ring
- X40    - Version ANSI RF300
- X41    - Version ANSI RF300 + casing wear ring
- XXX    - Special versions, e.g. with vent piping, etc.

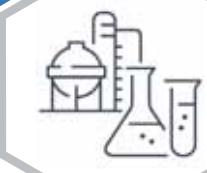

## Materials

Please note the information below for the following material tables

- Standard variants of the materials in Table 1
- Further material options in Table 2
- Wear rings available in other materials or with hard facing on request
- Can for MAK (magnetic coupling) made of Hastelloy as standard, other materials available
- For CNPH variants, Can of MAK is made of titanium as standard

Part	Material code

## Types of seals

Directly integrated balanced or unbalanced seals (Z1XX or Z2XX)

- Standard version: Direction-of-rotation-independent rubber bellow seal with carbon/SiC material combination and elastomers in NBR, FKM, EPDM, HNBR, etc.
- Special versions with covered springs, metal bellow or highly chemical-resistant elastomers such as FFKM

Cartridge seals installed on the casing cover

- Connections to cartridge seals always NPT thread 1/4", 3/8" 1/2" according to seal size/shaft diameter
- Cartridge seals standardized to match pump material, higher-quality materials for parts in contact with media possible at any time
- Single-acting seals as above, but with flush connections and throttle chambers (quench chambers) for leakage drainage or liquid supply (e.g. API Plan 02, 11/61) (Z1XX or Z2XX)
- Double-acting seals in back-to-back arrangement and integrated pumping thread (API Plan 53b) (Z3XX)
  - Material pairings as desired and depending on the medium
  - Carbon/SiC or SiC/SiC on the product side and carbon/SiC on the atmospheric side
  - O-rings in contact with the medium available in various materials (NBR, FKM, EPDM, FFKM), etc.
- Any cartridge seal (specific manufacturers, design variants, etc.) is possible on request
- Mounted sealing systems on base frame are possible

Sealless variant with magnetic coupling (Z8XX)

- Medium-lubricated slide bearing in SiC/SiC + 1.4571
- Can in Hastelloy (see material table)
- Magnets made of Sm2Co17
- Any additional static sealing elements required made of any elastomers
- Safety chamber behind the magnetic coupling is available in various designs (leakage drainage only, throttle bushing, gas seal)

Other versions available on request (e.g. packing)

## Drives

Standard three-phase asynchronous motors with efficiency classes in accordance with EN 60034-30 are used as drives in complete systems or the CNPN/CNPHN variants. Optionally, motors in higher efficiency classes, according to NEMA (electrical or mechanical), hazardous location versions (ATEX), and special designs with specific approvals or classifications are available.

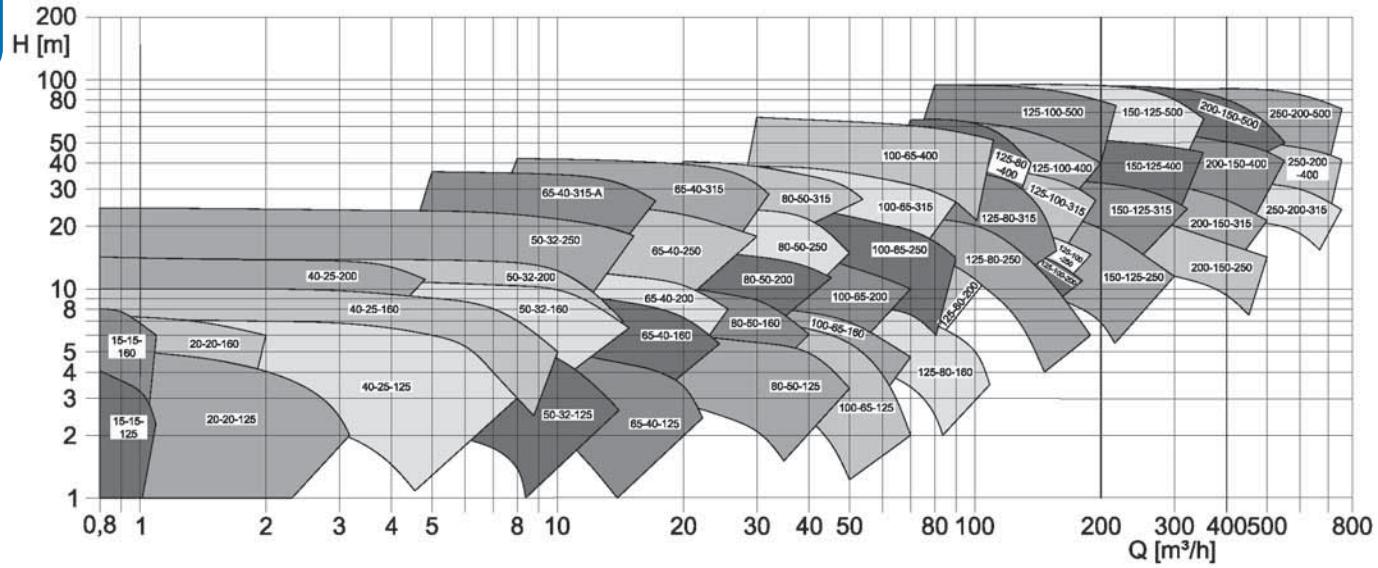

Depending on the motor and application, supplementary control panels or frequency converters can be supplied with the drive and mounted directly on the motor or attached to the base frame.

## Information on dimensional drawings and exploded views

Please note the information below regarding the following pages:

- All dimensions are given in mm.
- Flanges are designed in accordance with EN 1092-2 PN16, PN25 or PN40 as standard.
- Flanges can alternatively be drilled in accordance with ANSI B16.5 150RF or 300RF.
- Weights of individual components are available on request for specific orders.
- Dimensional drawings for the CNPN/CNPHN series as well as for other sizes and special variants are available on request.
